Blower Motor Replacement Delphi

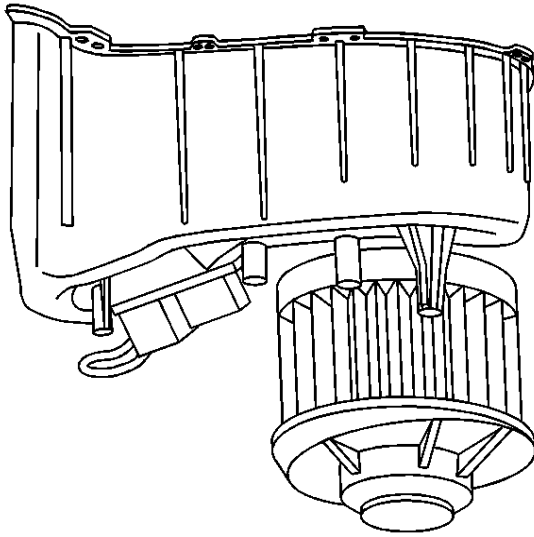

[Removal Procedure](#)

1. If equipped, remove the sound insulator panel. Refer to [Insulator Replacement - Instrument Panel \(I/P\)](#) in Instrument Panel, Gages, and Console.
2. Remove the blower motor insulating cover screws.
3. Disconnect the electrical connector from the blower motor.
4. Remove the blower motor insulating cover.

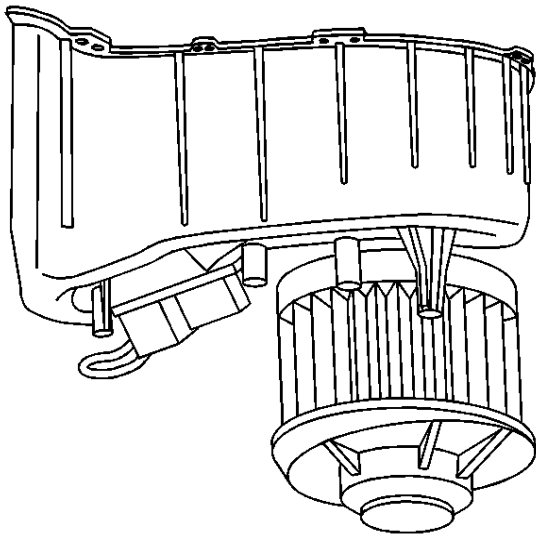

5. Pull the retaining tab down while turning the blower motor counterclockwise in order to disengage the blower motor from the heater/ventilation module.

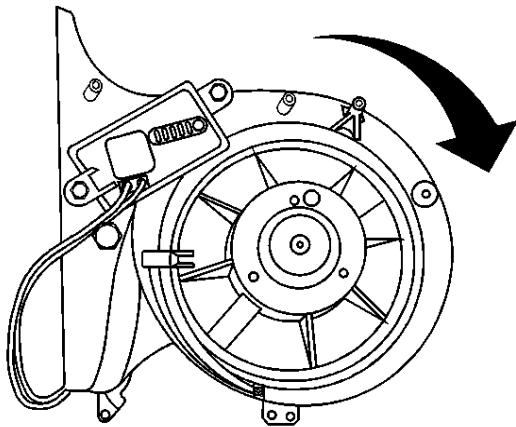

6. Remove the blower motor.

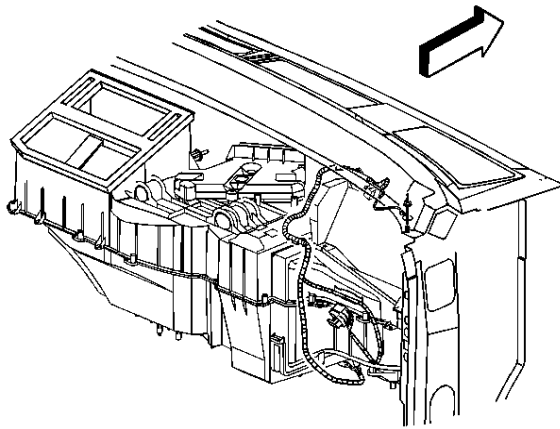

[Installation Procedure](#)

1. Install the blower motor.

2. Install the blower motor to the heater/ventilation module. Turn the blower assembly clockwise until the retaining tab locks into place.
3. Install the blower motor insulating cover.

4. Connect the electrical connector to the blower motor.

Notice

Use the correct fastener in the correct location. Replacement fasteners must be the correct part number for that application. Fasteners requiring replacement or fasteners requiring the use of thread locking compound or sealant are identified in the service procedure. Do not use paints, lubricants, or corrosion inhibitors on fasteners or fastener joint surfaces unless specified. These coatings affect fastener torque and joint clamping force and may damage the fastener. Use the correct tightening sequence and specifications when installing fasteners in order to avoid damage to parts and systems.

5. Install the blower motor insulating cover screws.

Tighten

Tighten the screws to 1.6 N·m (14 lb in).

6. If equipped, install the sound insulator panel. Refer to [Insulator Replacement - Instrument Panel \(I/P\)](#) in Instrument Panel, Gages, and Console.
